ANALYST NOTE

Hera local LLM

The EVO_EVOEVOEVOE_v1683 strategy on LPG delivered a sharp +41.35% return with a 1.13 Sharpe, yet the 21.82% drawdown and mere three trades reveal severe statistical noise rather than robust alpha. Such a shallow sample size cannot reliably distinguish genuine edge from random luck, making the high win rate of 66.7% statistically insignificant without further validation. While the capital grew to \$14,139.63, the extreme volatility suggests overfitting to specific historical conditions rather than sustainable market adaptation. The approach requires extensive walk-forward analysis across multiple market regimes to confirm stability before any live deployment is considered.
