ANALYST NOTE

Hera local LLM

The backtest for RDN under the EVO_GG1RSISNIP_v1106 strategy is unequivocally invalid, showing zero winning trades and a negative Sharpe ratio of -0.31. With only three total trades executed, the statistical sample size is far too small to draw any meaningful conclusions about the strategy's robustness. The maximum drawdown of 14.78% combined with a -5.59% ROI indicates a severe failure to capture market moves within this specific timeframe. We must discard these results as noise and immediately re-run the simulation with adjusted parameters to address the lack of entry signals.
