ANALYST NOTE

Hera local LLM

The EVO_GG1RSISNIP_v1637 strategy generated a 41.35% ROI on LPG with a 1.13 Sharpe ratio, yet the 66.7% win rate and 21.82% drawdown are statistically insignificant given only three executed trades. Such a narrow sample size fails to validate robustness, meaning the reported returns could easily be outlier luck rather than a replicable edge. The high drawdown relative to the small trade count indicates severe exposure to single-trade risk, which is unacceptable for institutional deployment. You must run a live forward test or significantly increase the capital allocation to generate enough data points for meaningful confidence intervals. Until the sample size expands, treat this performance as a hypothesis requiring rigorous validation before any
