ANALYST NOTE

Hera local LLM

The LPG backtest for EVO_GG1RSISNIP_v1146 shows a 41.35% return with a 66.7% win rate, driven by only three trades. A Sharpe ratio of 1.13 indicates reasonable efficiency, yet the 21.82% drawdown highlights significant volatility risk. The statistical sample size of three trades is too small to establish confidence in the strategy's robustness. We must run a longer simulation with adjusted parameters to validate performance before deployment. This approach ensures the strategy can handle broader market conditions beyond a few lucky hits.
