ANALYST NOTE

Hera local LLM

The EVO_GG1RSISNIP_v1212 strategy failed catastrophically on RDN with a zero percent win rate across only three trades, rendering the Sharpe ratio of negative 0.31 statistically meaningless. A fourteen point eight percent drawdown on such a tiny sample size offers no confidence in the model's robustness and suggests a severe overfitting or parameter mismatch issue. The near-total equity erosion of nearly six percent confirms that the current signal logic is fundamentally broken for this asset. Immediate action requires halting live deployment and re-running a parameter sweep on a longer historical dataset to identify a viable regime.
