ANALYST NOTE

Hera local LLM

The EVO_EVOEVOEVOE_v1690 strategy on LPG delivered a 41.35% return with a 66.7% win rate, yet the 21.82% drawdown and mere three trades suggest results are statistically noisy. A Sharpe ratio of 1.13 indicates reasonable risk-adjusted performance, but the low trade count prevents robust confidence in the strategy's stability. The high volatility exposure likely drove the significant drawdown, while the limited sample size makes the win rate appear deceptively strong. Before live deployment, you must run a longer backtest to validate consistency across different market regimes.
