ANALYST NOTE

Hera local LLM

The EVO_GG1RSISNIP_v1255 strategy on GC=F failed decisively, posting a -4.00% return and a negative Sharpe ratio of -0.36 due to a dismal 33.3% win rate. With only three trades executed, the results lack statistical significance and could easily be noise rather than a flawed methodology. A 12.60% maximum drawdown indicates poor risk control during volatile gold movements. We must expand the sample size before drawing conclusions or optimizing parameters. Next, run a longer backtest on the same symbol to validate if these losses are systemic or an anomaly.
