ANALYST NOTE

Hera local LLM

The EVO_GG1RSISNIP_v1337 backtest on RDN failed completely with zero winning trades and a negative Sharpe, indicating the strategy logic is fundamentally misaligned with current market structure. With only three executions, the statistical sample is too small to derive meaningful alpha, rendering the -5.59% loss statistically insignificant rather than predictive. The maximum drawdown of 14.78% suggests high sensitivity to volatility that the current filters failed to mitigate. A concrete next step involves recalibrating entry thresholds against expanded volatility regimes before re-running the simulation with a larger dataset. This analysis remains educational and does not constitute investment advice.
