ANALYST NOTE

Hera local LLM

The EVO_EVOEVOE_v1881 strategy on GOOGL generated a +6.75% ROI with a modest 0.54 Sharpe, though only three trades were executed, severely limiting statistical significance. A 33.3% win rate paired with a 15.79% drawdown suggests the logic captures outliers rather than consistent alpha, making the returns potentially noisy. Given the small sample size, this performance could easily be random noise rather than a robust edge for institutional deployment. Next, backtest the same parameters on a broader historical range to validate if the 33% win rate persists outside this narrow window. The data currently indicates high variance that requires deeper sampling before any capital allocation decision.
