ANALYST NOTE

Hera local LLM

The EVO_EVOEVOEVOE_v1892 strategy generated a +41.35% return on LPG with a modest 1.13 Sharpe ratio, but the sample of only three trades renders the 66.7% win rate statistically insignificant for institutional deployment. A 21.82% maximum drawdown indicates substantial risk exposure that conflicts with conservative portfolio mandates despite the positive final capital of \$14,139.63. The high return per trade suggests a few large winners are driving performance rather than consistent edge, creating a fragile equity curve vulnerable to regime shifts. We must expand the test period and reduce trade frequency to validate whether this alpha persists beyond a single lucky streak.
