ANALYST NOTE

Hera local LLM

The EVO_EVOEVOEVOE_v2375 backtest on VOXR demonstrates a fundamental failure with a negative ROI and Sharpe ratio, driven by a mere 3 trades yielding only a 33.3% win rate. Such a minimal sample size provides zero statistical confidence, rendering the drawdown of 11.32% an outlier rather than a robust risk metric. The strategy clearly lacks the adaptive logic needed to navigate current VOXR volatility without incurring immediate capital erosion. We must discard this parameter set and re-evaluate the entry thresholds or timeframes before deploying any capital.
