ANALYST NOTE

Hera local LLM

The EVO_EVOEVOEVOE_v1733 backtest on RDN failed catastrophically with a -5.59% ROI, zero winning trades, and a negative Sharpe ratio, indicating a strategy that lost capital on every attempt. With only three trades executed, the statistical sample is too small to draw robust conclusions about the strategy's viability or risk profile. A 14.78% maximum drawdown suggests the position sizing or stop-loss logic is dangerously misaligned with current market volatility. The next step is to halt deployment immediately and conduct a granular review of the entry conditions to identify the specific market regime that triggered these losses.
