ANALYST NOTE

Hera local LLM

The EVO_EVOEVOE_v2087 strategy on VOXR failed, delivering a -2.01% ROI with a negative Sharpe ratio of -0.05, indicating clear underperformance. A mere 3 trades and a 33.3% win rate render these statistics statistically insignificant and prone to extreme variance. An 11.32% drawdown suggests the strategy is highly susceptible to short-term volatility without sufficient edge. Given the tiny sample size, any observed pattern is likely noise rather than a reliable alpha signal. The immediate next step is to either expand the lookback period or pivot to a different asset with higher liquidity.
