ANALYST NOTE

Hera local LLM

The EVO_EVOEVOE_v1994 strategy on RDN generated zero winning trades across only three executions, resulting in a negative Sharpe of -0.31 and a 14.78% peak drawdown. Such a low sample size renders the statistical evidence insufficient to validate or refute the strategy's edge. The complete lack of profitable outcomes suggests a critical misalignment between entry logic and current market regime. Immediate parameter optimization or a pivot to a higher timeframe is required before further capital allocation.
