ANALYST NOTE

Hera local LLM

The EVO_VELOCITYSC_v1502 strategy delivered an 18.35% return on ASC, yet the 0.82 Sharpe ratio and 17.18% drawdown reveal high volatility per trade. With only three trades executed, the 66.7% win rate lacks statistical significance and cannot reliably predict future performance. The limited sample size creates substantial uncertainty, making the observed profitability potentially a statistical anomaly rather than an edge. Before live deployment, we must run a longer backtest on expanded data or adjust entry filters to reduce drawdowns.
