ANALYST NOTE

Hera local LLM

The EVO_EVOVELOCIT_v1529 strategy on VOXR failed, generating a -2.01% return with a negative Sharpe ratio of -0.05. Only three trades were executed, resulting in a precarious 33.3% win rate and an 11.32% maximum drawdown. Such a tiny sample size renders the statistical confidence negligible and precludes any meaningful inference on strategy viability. The signal logic clearly lacks robustness against current market volatility for this specific asset. I will retest the parameters on a different timeframe to validate whether the failure was regime-specific or structural.
