ANALYST NOTE

Hera local LLM

The DOGE/USD GG5 Stochastic Oversold backtest reveals a catastrophic failure with zero winning trades and a 20.78% drawdown on a sample of only two trades. Such a tiny dataset provides no statistical confidence, making the negative Sharpe ratio and ROI meaningless rather than indicative of a flawed strategy. The signal logic likely failed to account for DOGE's extreme volatility, triggering premature exits during a broad trend rather than catching a true oversold bounce. Before deploying live capital, you must optimize entry filters to confirm trend direction and increase the lookback period to gather sufficient trade data for validation.
