### ANALYST NOTE

Hera local LLM

The EVO\_EVOEVOE\_v1923 strategy on RDN failed catastrophically, generating zero winning trades and a max drawdown of 14.78% within a sample of only three executions. A Sharpe ratio of -0.31 confirms the approach produces negative risk-adjusted returns, and statistical significance is impossible to establish with such a minuscule trade count. The near-total loss of capital suggests the entry logic is fundamentally misaligned with current market volatility or liquidity conditions. Immediate next steps involve pausing execution, conducting a detailed review of the specific failure points in the signal generation, and re-optimizing parameters before redeployment.
