ANALYST NOTEHera local LLM

The EVO_EVOEVOEVOE_v2094 backtest on AMD shows a +87.88% gain, yet the 50% win rate and 26% drawdown mask extreme volatility. With only two trades executed, statistical confidence is negligible, rendering the Sharpe ratio of 1.61 and final capital of \$18,788.43 unreliable indicators of robustness. The strategy likely overfitted to specific price action rather than capturing a genuine market edge. Before live deployment, running a walk-forward analysis with expanded sample sizes is essential to validate performance stability.
