ANALYST NOTE

Hera local LLM

The EVO_EVOEVOEVOE_v1928 strategy on VOXR failed decisively, posting a -2.01% ROI and negative Sharpe ratio due to a severe 33.3% loss rate. With only three executed trades, the statistical sample size is insufficient to validate or invalidate the logic, rendering the negative drawdown of 11.32% statistically insignificant noise. The capital erosion suggests the entry conditions were fundamentally misaligned with current volatility or liquidity constraints. We must expand the backtest window or adjust parameters to generate a robust dataset before any live deployment is considered.
