ANALYST NOTE

Hera local LLM

The backtest for NVDA shows a marginal negative ROI of -0.66% and a negligible Sharpe ratio of 0.09, indicating the strategy failed to generate excess returns relative to risk. With only three total trades, the sample size is statistically insignificant, meaning the 33.3% win rate and 23.49% max drawdown do not provide reliable evidence of strategy performance. The high drawdown relative to the small trade count suggests poor risk management or excessive exposure per position. A concrete next step is to expand the backtest period to at least fifty trades to establish statistical confidence before further optimization.
