ANALYST NOTE

Hera local LLM

The GG5 Stochastic Oversold strategy on SOL/USD failed completely with a zero win rate and a severe 46.26% drawdown across only four trades. Such a tiny sample size provides no statistical confidence, rendering the negative Sharpe ratio of -2.49 meaningless for production deployment. The model likely overfitted to noise or entered during a prolonged downtrend where mean reversion signals were invalid. We must expand the backtest window and increase trade frequency before considering any parameter adjustments or live deployment.
