ANALYST NOTE

Hera local LLM

The VOXR GG3_MACD strategy on AAPL yielded a +10.70% ROI with a 50% win rate, but the statistical significance is negligible due to only two executed trades. A Sharpe ratio of 0.87 indicates mediocre risk-adjusted returns, while an 11.50% maximum drawdown suggests high volatility exposure for such a small sample. The strategy generated alpha only once, meaning the second result could easily be noise rather than a reliable signal. We must expand the sample size by running a longer backtest or increasing the lookback period to validate these parameters.
