ANALYST NOTE

Hera local LLM

The AMD backtest for EVO_GG1RSISNIP_v9 shows an 87.88% return driven by only two trades, rendering the 1.61 Sharpe ratio statistically insignificant. A 50% win rate with a 26% drawdown indicates high volatility and a lack of robustness in the signal logic. Such a small sample size prevents any reliable assessment of the strategy's true risk-adjusted performance. Further testing on longer historical data is required to validate the observed results.
