ANALYST NOTE

Hera local LLM

The LPG backtest for strategy EVO_GG1RSISNIP_v216 delivered a 41.35% return, yet the statistical significance is critically low due to only 3 executed trades. While the 1.13 Sharpe ratio and 66.7% win rate suggest potential edge, the 21.82% maximum drawdown indicates substantial volatility risk that is impossible to quantify with such a small sample. We must treat these results as an unconfirmed hypothesis rather than a validated production strategy. The immediate next step is to expand the backtest window or adjust parameters to generate a minimum of 50 trades for reliable performance profiling.
