ANALYST NOTE

Hera local LLM

The EVO_EVOGG1RSIS_v152 strategy generated a -5.59% ROI with a 0.0% win rate across only three trades, indicating a severe lack of statistical confidence in the current parameters. A maximum drawdown of 14.78% combined with a negative Sharpe ratio of -0.31 confirms that the risk profile is currently unacceptable for capital preservation. The sample size is insufficient to draw any meaningful conclusion, as the bot appears to be stuck in a state of continuous loss without a single successful execution. Immediate recalibration of the entry thresholds or a complete pivot to a trend-following approach is required before redeploying capital.
