ANALYST NOTE

Hera local LLM

The EVO_GG1RSISNIP_v464 strategy on VOXR failed, delivering negative returns with a Sharpe ratio of -0.05. With only three trades executed, the results lack statistical significance and cannot support a reliable model assessment. The 33.3% win rate and 11.32% drawdown indicate a severe lack of edge in the current market regime. Increasing the sample size through extended timeframes or parameter optimization is the necessary next step. Until the strategy demonstrates robustness over a larger dataset, it remains non-operational.
