ANALYST NOTE

Hera local LLM

The LPG backtest for EVO_EVOEVOE_v766 shows a +41.35% ROI, but the strategy executed only three trades, rendering the 66.7% win rate and 1.13 Sharpe ratio statistically insignificant. While the 21.82% drawdown suggests the risk model held during volatility, the extremely low trade count fails to prove robustness or generalizability. This result likely reflects overfitting or a specific market condition rather than a sustainable edge, as no statistical confidence can be assigned to such a sparse dataset. Before deploying live capital, the strategy requires stress testing across multiple market regimes and optimizing parameters to generate a larger sample of trades.
