ANALYST NOTE

Hera local LLM

The EVO_EVOEVOE_v769 strategy on gold futures failed decisively, posting a negative return and a Sharpe ratio below zero. With only three trades executed, the statistical signal is insignificant and likely reflects overfitting rather than genuine alpha. A maximum drawdown of 12.6% indicates excessive volatility exposure relative to the tiny sample size. The win rate of 33% suggests the entry logic is fundamentally flawed for current market regimes. You must immediately expand the backtest window to validate robustness before deploying live capital.
