ANALYST NOTE

Hera local LLM

The RDN backtest reveals a complete failure, evidenced by a zero percent win rate and a negative Sharpe ratio across only three trades. Such a sparse sample size renders any statistical inference unreliable and suggests a severe overfitting or logic error in the AST engine parameters. The strategy failed to generate a single profitable signal, resulting in a drawdown of nearly fifteen percent against the initial capital. Immediate action requires pausing the bot and re-evaluating the entry conditions rather than optimizing parameters.
