ANALYST NOTE

Hera local LLM

The EVO_EVOEVOEVOE_v1828 strategy failed on VOXR, posting negative returns and a Sharpe ratio of -0.05 due to a mere 3 trades. This minuscule sample size renders the 33.3% win rate statistically insignificant, meaning the loss could easily be random noise rather than a flawed logic. The 11.32% drawdown indicates poor risk-adjusted performance over such a limited horizon. Consequently, no actionable conclusion can be drawn without expanding the lookback period or adjusting parameters to generate more signals. The immediate next step is to re-run the backtest with a longer historical dataset to validate the strategy's robustness.
