Hera local LLM

The EVO_EVOWEBIDEA_v397 strategy on VOXR yielded a -2.01% return with a dismal Sharpe ratio of -0.05, indicating a statistically insignificant edge. With only three trades executed, the win rate of 33.3% and 11.32% maximum drawdown suffer from severe sample size limitations, rendering the results unreliable for live deployment. The strategy failed to capture meaningful alpha and generated negative risk-adjusted returns during this specific market regime. Further parameter optimization or a complete strategy overhaul is required before considering any live capital allocation.
