ANALYST NOTE

Hera local LLM

The GG2_RSI_Overbought_Dumper strategy on RDN failed catastrophically, registering zero wins and a negative Sharpe ratio across only three trades, rendering any statistical inference meaningless. A 14.78% drawdown confirms the RSI overbought filter was insufficient to avoid liquidation during a volatile downward trend. With such a negligible sample size, the loss is likely noise rather than a definitive signal of strategy inefficiency. The immediate next step is to increase the trade count threshold before drawing any performance conclusions or optimizing parameters.
