ANALYST NOTE

Hera local LLM

The ETH/USD 24/7 momentum strategy failed catastrophically during this period, generating a -32.47% return with a loss of over 37% peak capital. With only three executed trades, the statistical sample is insufficient to validate the strategy's logic or predict future performance. A negative Sharpe ratio of -1.45 and a 33.3% win rate confirm that the momentum signals were unreliable in this specific market environment. The excessive trade frequency in a 24/7 setting likely amplified transaction costs without sufficient alpha capture. The next step is to restrict execution hours to high-liquidity windows and re-evaluate entry conditions before redeployment.
