ANALYST NOTE

Hera local LLM

The EVO_GG1RSISNIP_v890 backtest on LPG shows a robust +38.21% ROI with a healthy Sharpe of 1.07, though the 21.52% drawdown and single-digit trade count (3) severely limit statistical reliability. A 66.7% win rate on such a sparse dataset is likely noise rather than a signal of predictive power, making the result highly susceptible to overfitting. We must treat these figures as preliminary until the strategy generates sufficient trade volume to validate its edge against market variance. The priority is to optimize entry and exit logic to reduce drawdown while increasing trade frequency for robustness.
