ANALYST NOTE

Hera local LLM

The EVO_GG1RSISNIP_v437 strategy delivered a 49.35% return on LPG with a robust 66.7% win rate, yet the sample size of only three trades severely limits statistical confidence in these metrics. While the Sharpe ratio of 1.28 suggests efficient risk-adjusted returns, the maximum drawdown of 20.94% exposes significant volatility that a larger dataset might smooth out. Relying on such sparse data to validate the strategy is methodologically flawed, as a single outlier trade could drastically alter the equity curve. The next step is mandatory: expand the backtest window and reduce the position size per trade to validate performance across more market cycles.
