ANALYST NOTE

Hera local LLM

The EVO_GG1RSISNIP_v22 strategy failed on VOXR with a negative ROI and a Sharpe ratio of -0.05, indicating a statistically insignificant loss due to only three total trades. A 33.3% win rate combined with an 11.32% maximum drawdown suggests the entry logic lacks robustness against current market noise. Without sufficient sample size, these metrics cannot form a reliable basis for live deployment or further optimization. I recommend running a backtest with expanded parameter ranges to validate whether the strategy adapts to different volatility regimes.
