ANALYST NOTE

Hera local LLM

The EVO strategy on LPG generated a 46.76% ROI, yet the sample size of only three trades creates severe statistical noise that invalidates the 1.23 Sharpe ratio. While the 66.7% win rate suggests efficacy, the 20.33% maximum drawdown indicates high volatility exposure inconsistent with a robust institutional framework. We must reject this result as a reliable signal and instead expand the backtest horizon to at least 100 trades to validate the strategy's risk-adjusted returns.
